

CoreAxis Technologies

Employee Handbook

1. Welcome

Welcome to CoreAxis Technologies. We are genuinely glad you are here, and we look forward to building something meaningful together.

CoreAxis Technologies develops AI-powered enterprise software, Retrieval-Augmented Generation (RAG) systems, Large Language Model applications, cloud-based platforms, intelligent automation solutions, AI agents, and enterprise analytics products. Our work sits at the intersection of research and real-world impact — and every person on this team has a role in shaping what responsible, enterprise-grade AI looks like in practice.

We are headquartered in Chennai, Tamil Nadu, with a branch office in Bengaluru, Karnataka. Our team of approximately 100 people operates on a hybrid working model that balances the energy of in-person collaboration with the flexibility that modern knowledge work demands. We hope your time at CoreAxis Technologies is professionally stimulating, personally rewarding, and something you look back on as a chapter that genuinely moved your career forward.

1.1 Purpose of This Employee Handbook

This handbook is your primary reference for understanding the policies, procedures, and standards that govern life at CoreAxis Technologies. It covers what you can expect from us and what we expect from you — from how we work day to day to how we handle performance, conduct, and time away from work.

Not every detail of every policy lives in this document. Department-level guidelines, project-specific procedures, and directives communicated by management are all part of the broader framework this handbook sits within. This handbook may be updated from time to time; when significant changes are made, Human Resources will communicate them through CoreHR and AxisHub. The most current version is always available on CoreDocs.

We administer these policies fairly and consistently, taking into account the specific facts of each situation. If something is unclear, your manager or any member of the Human Resources team is always a good first stop.

Failure to comply with the standards and policies set out here may result in disciplinary action, up to and including termination of employment.

2. About CoreAxis Technologies

2.1 Our Vision

CoreAxis Technologies envisions a world where AI is not just a technology feature — it is a trusted partner in enterprise decision-making. We are building the systems, practices, and culture that will make that vision a reality: AI that is accurate, explainable, and designed with accountability at its core.

2.2 Our Mission

To build secure, scalable, and responsible AI solutions that help businesses automate complex workflows and make better, faster decisions.

2.3 Core Values

Everything we build and every decision we make is guided by five core values:

Responsibility. We design AI systems we are willing to stand behind. That means being honest about what our technology can and cannot do, proactively identifying risks, and choosing the harder right path over the easier shortcut.

Precision. In AI, the details matter enormously. We hold our work — our code, our models, our documentation, our communication — to a high standard of accuracy and thoroughness.

Openness. We share knowledge freely, challenge ideas respectfully, and believe that good thinking can come from anywhere in the organisation. Hierarchy does not determine whose ideas are worth hearing.

Ownership. We take responsibility for our work from the first commit to production deployment. We do not hand problems over the fence — we see them through.

Impact. We measure success by the value our work creates for our clients and their users, not by the sophistication of our methods. Complexity is a cost, not a virtue.

2.4 Innovation Culture

Innovation at CoreAxis Technologies is not a single event — it is a continuous practice embedded in how we work. We run an annual Innovation Week across both offices, during which teams set aside regular project work to explore new ideas, prototype experimental features, and present their findings at an open showcase. Engineering Demo Days take place quarterly and give every team the opportunity to demonstrate recent technical work to the wider company, including both completed features and works-in-progress.

Beyond structured events, we encourage a culture of curiosity in everyday work. Teams are expected to stay current with developments in the AI field, and we support this through learning time, access to research publications, and internal knowledge-sharing channels on Slack and Confluence. Technical Communities of Practice — informal cross-team groups organised around topics such as LLM evaluation, RAG architecture, and MLOps — meet regularly to share expertise and shape internal standards.

We also hold a quarterly AI Research Showcase where members of the AI and Machine Learning team present recent experiments, findings, and model evaluations to an audience that includes both technical and non-technical colleagues. These sessions help build shared understanding of our technical direction and keep the entire organisation engaged with the work at the frontier.

2.5 Customer-First Philosophy

Our clients trust us with their most sensitive business workflows. That trust is not a given — it is earned with every interaction, every release, and every support response. When making decisions about product direction, feature prioritisation, or service delivery, we ask ourselves what genuinely serves our clients' long-term interests, not just what is quickest or easiest in the moment.

This commitment to the customer shapes how every team at CoreAxis Technologies operates. Engineers write code they would want running in their own systems. AI teams document model limitations clearly. Security teams treat client data as if it were their own. These are not aspirational statements — they are operating principles

2.6 Responsible AI Culture

Responsible AI is not a compliance checkbox at CoreAxis Technologies. It is a design philosophy that begins when a project starts and continues long after deployment. We believe that AI systems which are fair, transparent, and explainable are also — in the long run — more successful commercially. Our clients depend on us to build systems they can trust, explain, and defend to their own stakeholders.

In practice, this means that red team testing, human evaluation, hallucination mitigation, and prompt injection awareness are standard steps in our delivery process — not optional extras. It means our engineers are expected to understand the ethical implications of the systems they build, not just their technical function. And it means that when an AI system behaves unexpectedly or produces outputs that could cause harm, we take that seriously and address it directly.

Responsible AI is a shared responsibility. Every team at CoreAxis Technologies — from AI and Machine Learning to Software Engineering, Information Security, and Human Resources — has a role in upholding it.

2.7 Continuous Learning Culture

The AI field moves quickly. Staying technically current is not optional at CoreAxis Technologies — it is part of the job. We invest in our people's development through structured learning time, a dedicated learning budget for each employee, access to platforms including Coursera and Udemy, and sponsorship for industry conferences and AI certifications.

Monthly Learning Hours are a standing fixture in team calendars, dedicated to exploring new tools, reviewing research papers, or working through structured courses together.

KnowledgeSphere — our internal knowledge base — is maintained collaboratively and serves as the institutional memory of the organisation, capturing everything from onboarding guides to architectural decision records and post-incident reviews.

We also support employees who wish to contribute to the broader research community. Where appropriate and in accordance with our intellectual property policies, CoreAxis Technologies supports internal research publication and encourages participation in peer-reviewed venues and open AI governance discussions.

2.8 Collaboration Principles

CoreAxis Technologies works best when people collaborate well across teams and disciplines. Building AI products requires coordination between researchers, engineers, security professionals, and client-facing teams — and that coordination only works when people communicate openly, share context generously, and treat each other as partners rather than handoff points.

A few principles guide how we work together:

We communicate asynchronously by default — using Slack, Confluence, and CoreDocs to document decisions and share context — but we are deliberate about when synchronous discussion is genuinely needed.

We document our reasoning, not just our conclusions. Technical decisions captured in Confluence and architectural records in CoreDocs help future teammates understand not just what was built, but why.

We participate in cross-functional work actively. Quarterly Town Hall Meetings bring the whole company together to discuss direction, progress, and company health. Every employee is expected to attend and encouraged to ask questions.

We recognise good work formally through the Employee Recognition Awards programme, which is run quarterly and acknowledges contributions that embody our core values.

3. Company Organization

3.1 Human Resources

The Human Resources department is the people team at CoreAxis Technologies. HR is responsible for the full employee lifecycle — from recruitment and onboarding through to performance management, employee relations, learning and development, and offboarding. The team manages CoreHR, which is the company's centralized HR information system and the primary platform for leave requests, personal data updates, payslip access, and HR documentation.

HR partners closely with department managers to support workforce planning, resolve employee concerns, and maintain a workplace culture that is professional, inclusive, and aligned with our core values. HR also leads the company's engagement programmes, including the Employee Recognition Awards, town halls, and onboarding inductions for new joiners. If you have a question about your employment terms, benefits, conduct policies, or any other people-related matter, Human Resources is your first point of contact. The team maintains a presence at both the Chennai and Bengaluru offices and can be reached through CoreHR or directly via Slack.

3.2 AI and Machine Learning

The AI and Machine Learning department is at the technical heart of CoreAxis Technologies. This team is responsible for the research, development, and operationalisation of the AI systems that power our products — including large language model integrations, RAG pipelines, embedding models, vector database infrastructure, fine-tuned domain models, and autonomous AI agents.

The team works across the full model lifecycle: problem framing, data curation and versioning, experiment design, model training and evaluation, human evaluation pipelines, red team testing, and production deployment. All model development is tracked through MLflow, and model versioning and registration are managed through the company's internal Model Registry.

Experiment tracking, evaluation results, and deployment approvals are documented in Confluence, ensuring full traceability from research to production.

AI and Machine Learning engineers and researchers work closely with the Software Engineering team on system integration and with Information Security on secure AI deployment. The team also leads the quarterly AI Research Showcase and maintains CoreAxis Technologies' internal RAG platform, which serves as both a product and a development environment.

3.3 Software Engineering

The Software Engineering department builds and maintains the cloud-based platforms, enterprise applications, and integration layers that bring our AI capabilities to market. Engineers in this department design and develop backend services, frontend interfaces, APIs, and the infrastructure that connects client systems to CoreAxis Technologies' AI stack.

The team uses GitHub Enterprise for source control, Jira for project and sprint management, and Azure DevOps for CI/CD pipelines. Containerisation is handled through Docker and Kubernetes, and engineers are expected to follow the secure development standards published jointly by Software Engineering and Information Security. Code reviews are a mandatory step in the deployment pipeline, and all pull requests require approval from at least one senior engineer before merging.

Software Engineering runs Engineering Demo Days each quarter, providing a structured opportunity for engineers to share technical work with the broader organisation. These sessions cover new features, architectural decisions, lessons learned from incidents, and explorations of emerging technologies relevant to the product roadmap.

3.4 Information Technology

The Information Technology department keeps CoreAxis Technologies running. IT is responsible for managing the company's internal infrastructure — including corporate devices, network access, cloud account administration, identity and access management, software licence provisioning, and internal tooling support.

Employees who need IT assistance can raise a request through CoreSupport, the company's internal IT service desk. CoreSupport handles everything from device provisioning and software access requests to VPN configuration and onboarding setups for new joiners. Most standard requests are resolved within one business day; critical incidents are escalated and triaged by the on-call IT lead.

IT works closely with Information Security on endpoint management and access control, and with HR to coordinate the technical components of onboarding and offboarding. The team manages the company's Microsoft Teams and Slack environments and provides technical support for hybrid collaboration tools used across both offices.

3.5 Finance

The Finance department manages CoreAxis Technologies' financial operations, including payroll processing, accounts payable and receivable, budgeting, financial reporting, tax compliance, and vendor management. Finance partners with every department to support procurement decisions, project budgeting, and expense management.

Employees submit business expense claims through CoreExpense, the company's internal expense management system. Business travel bookings and approvals are coordinated through CoreTravel. Finance reviews all submitted expenses against company policy and processes approved reimbursements in the next available payroll cycle.

The Finance team operates primarily from the Chennai office and maintains formal financial controls aligned with applicable Indian accounting standards and regulatory requirements. For general payroll queries, employees can raise a ticket through CoreHR or contact the Finance team directly via Slack.

3.6 Information Security

The Information Security department is responsible for protecting CoreAxis Technologies' systems, data, and intellectual assets from internal and external threats. Given that we build and operate AI systems that process sensitive client data, information security is not a back-office function — it is a core part of how we deliver trustworthy products.

The Information Security team maintains CoreSecure, the company's security incident management platform, through which all security events, suspected breaches, and vulnerability reports must be logged. The team defines the access control standards, data classification policies, secure coding guidelines, and cloud security baselines that all other departments are expected to follow.

Information Security also conducts regular vulnerability assessments, penetration tests, and AI-specific red team exercises to identify weaknesses in our systems before they can be exploited. Employees are expected to engage constructively with security reviews and to treat security requirements — including prompt injection awareness, secrets management, and secure deployment practices — as non-negotiable aspects of their work, not obstacles to it. New hires complete a mandatory information security induction during onboarding. Refresher training is delivered annually through AxisLearn.

4. Your Employment – Generally

4.1 Your Employment Status

Your employment with CoreAxis Technologies is governed by the terms of your individual employment agreement and applicable Indian law. Unless your written employment contract specifies otherwise, either party may bring the employment relationship to an end by providing the notice period set out in your agreement. Any verbal assurances or informal promises of continued employment — regardless of who made them or in what context — are not binding unless they are documented in a signed written agreement.

4.2 Your Employment Classification

CoreAxis Technologies classifies its employees as follows, for the purposes of payroll administration, benefit eligibility, and legal compliance:

Regular Full-Time Employees: Employees scheduled to work standard full-time hours on an ongoing basis, who are not employed on a temporary or fixed-term basis.

Regular Part-Time Employees: Employees regularly scheduled to work fewer than full-time hours and not on a temporary basis. Part-time employees may be asked to take on additional hours temporarily when business needs require.

Fixed-Term or Temporary Employees: Employees engaged to complete a defined project or to fill a role for a specified period. Fixed-term employees may work full-time or part-time hours during their engagement.

Contract and Consulting Staff: Individuals engaged through third-party arrangements or personal services contracts who are not direct employees of CoreAxis Technologies. Their terms are governed by their respective contracts. Unless explicitly stated otherwise, they are not entitled to employee benefits described in this handbook.

Your classification will be confirmed in your offer letter or employment agreement.

4.3 Personnel Records

CoreAxis Technologies maintains personnel records for each employee for payroll, legal compliance, performance management, and operational purposes. It is important that these records are accurate and current.

You are responsible for keeping your personal information up to date. Changes to your residential address, contact details, emergency contacts, banking information, or family details should be updated promptly through CoreHR. If you need to review your personnel file, submit a request to the Human Resources department; you may do so in the presence of an HR representative, but you may not remove or copy documents from the file without authorisation.

4.4 Work Authorisation

All new employees are required to provide documentation confirming their identity and legal right to work in India before commencing employment. CoreAxis Technologies complies fully with applicable Indian law on employment eligibility. Employment will not begin, and compensation will not be issued, until the required documentation has been verified by Human Resources.

If your work authorisation status changes at any point during your employment, notify Human Resources immediately.

5. Working At CoreAxis Technologies

5.1 Hours, Schedules, and Overtime

CoreAxis Technologies' standard working hours are Monday through Friday, 9:00 AM to 5:00 PM. Your specific schedule will be confirmed by your manager at the time of joining and may vary depending on your role, team, and active project commitments.

Overtime may occasionally be necessary due to project deadlines, client commitments, or business-critical deliverables. All overtime must be authorised in advance by your manager. You are responsible for accurately recording your hours through CoreHR, which the Finance team uses to administer payroll and ensure compliance with applicable labour regulations.

Employees working from a remote location are expected to maintain the same standard of availability and responsiveness as they would in the office. Remote working does not change the expectations for work quality, communication, or participation in scheduled meetings and collaborative sessions.

5.2 Hybrid Work Model

CoreAxis Technologies operates on a hybrid working model that gives employees flexibility while maintaining the in-person collaboration that drives strong teams and cohesive culture. The default hybrid arrangement for each department is as follows:

Department	Default Working Arrangement
Human Resources	Primarily office-based
Finance	Office-first
Information Security	Office-first
Software Engineering	Hybrid (2–3 days per week in office)
AI and Machine Learning	Flexible hybrid (manager-agreed schedule)
Information Technology	Hybrid (based on support requirements)

These arrangements represent defaults, not guarantees. Project requirements, client engagements, security obligations, and team-specific needs may require adjustments to your normal pattern. Any deviation from your agreed arrangement should be discussed with and approved by your manager in advance.

Remote employees are expected to maintain a suitable working environment that supports focus and professional communication. Refer to the Employee Benefits section for information about the Home Office Allowance and internet reimbursement provided to support remote workers.

Hybrid schedules are managed and tracked through CoreHR. Questions about your specific arrangement should be directed to your manager or the Human Resources team.

5.3 Attendance and Timeliness

Consistent attendance and punctuality are fundamental to your role and to the smooth operation of your team. If you are unable to work on a given day due to illness, a family matter, or any other personal reason, notify your direct manager as early as possible — and before your scheduled start time — through whichever channel your manager has designated (typically a direct message on Slack or a phone call, followed by a leave request submitted through CoreHR).

Repeated unexcused absences or habitual tardiness will be addressed through the disciplinary process. An absence of two consecutive working days without timely notification to your manager may be treated as a voluntary resignation, subject to applicable law.

Where an illness-related absence exceeds three consecutive working days, a medical certificate from a registered physician will be required before you return to work.

5.4 Workplace Attire

CoreAxis Technologies' culture is collaborative and intellectually demanding rather than formally hierarchical. We expect employees to present themselves in a manner that is clean, professional, and appropriate to their context. Business casual attire is the general standard for office work. When attending client sites, external conferences, or industry events, employees are expected to dress to a standard that reflects well on the organisation.

If you are unsure what is appropriate for a specific occasion or role, ask your manager. Employees who attend the office in attire deemed inappropriate may be asked to change.

5.5 Meal Times and Breaks

Meal times and breaks are coordinated by managers within each team to ensure coverage and continuity. Break durations are governed by applicable labour regulations and communicated by your manager. Employees are responsible for managing their break times in a way that does not disrupt team workflows or client commitments.

5.6 Work Rules

CoreAxis Technologies is committed to a workplace — whether physical or virtual — that is respectful, professional, and conducive to high-quality work. We expect employees to treat colleagues, clients, vendors, and partners with integrity and courtesy at all times.

The following conduct is considered inconsistent with the standards of CoreAxis Technologies. This list is illustrative, not exhaustive:

- Unexcused absenteeism or repeated tardiness
- Theft of company property, client data, or intellectual assets
- Dishonesty or falsification of records, timesheets, expense claims, or reports
- Unlawful use, possession, or distribution of controlled substances
- Working while under the influence of alcohol or impairing substances
- Gambling on company premises or during working hours
- Criminal activity of any kind
- Possession of unauthorised weapons or hazardous materials on company premises

- Deliberate failure to complete assigned work or meet reasonable performance expectations
- Intentional damage to or destruction of company, client, or colleague property
- Harassment, bullying, or intimidation of any colleague or business partner
- Threats or acts of violence in the workplace or in connection with company business
- Unauthorised disclosure of confidential information, proprietary source code, AI model weights, API keys, client data, vector database contents, or internal datasets
- Violations of CoreAxis Technologies' information security or responsible AI policies
- Making false or defamatory statements about CoreAxis Technologies, its employees, its clients, or its technology in any forum, including social media

Violations may result in disciplinary action up to and including immediate termination of employment.

5.7 Business Expenses

CoreAxis Technologies reimburses employees for reasonable and necessary expenses incurred in the course of conducting authorised company business. All expenses require prior approval from your manager unless they fall within pre-approved expenditure thresholds. Claims must be submitted through CoreExpense with appropriate receipts and documentation within 30 days of the expense being incurred.

Business travel must be booked and approved through CoreTravel in advance. Employees are expected to follow the company's travel guidelines, including accommodation category limits and preferred vendor arrangements, as communicated by the Finance team.

Expenses that are personal in nature, excessive relative to the purpose, or submitted without adequate documentation will not be reimbursed. Questions about specific expense categories should be directed to Finance through CoreExpense or via Slack.

5.8 Performance Evaluation

We believe that clear, regular feedback is one of the most valuable things a manager can give. Your performance is subject to ongoing evaluation and will be reviewed formally at least once per year through CoreAxis Technologies' structured appraisal process. Appraisals consider your technical competencies, work output quality, collaboration, alignment with core values, and contribution to the team's and organisation's goals.

Performance discussions are two-way conversations. You are encouraged to come to your appraisal with your own assessment of your work, your development goals, and any feedback you have for your manager. Where performance concerns arise between formal cycles, your manager will communicate them promptly and constructively so that you have the opportunity to address them.

Employees are expected to take ownership of their own professional growth. AxisLearn — the company's internal learning platform — provides access to curated learning paths, internal training materials, and integrations with Coursera and Udemy. Employees should review their development goals with their manager at least twice per year.

5.9 Disciplinary and Corrective Action

Where an employee's conduct, attendance, or work performance falls below the standards expected, the company may initiate a disciplinary or corrective action process. The severity of the action will reflect the seriousness of the matter and the surrounding circumstances.

Measures may range from a verbal counselling or written warning through to a formal improvement plan, suspension, or termination. In cases of serious misconduct or gross negligence, CoreAxis Technologies may proceed directly to termination without prior warning.

5.10 Termination of Employment

Either you or CoreAxis Technologies may bring the employment relationship to an end by providing the notice period specified in your employment agreement, in accordance with applicable law. On your last day, you are required to return all company property immediately and in good condition. This includes company-issued devices (laptops, mobile phones, access badges), software licences, access credentials (including API keys, cloud accounts, and repository access tokens), internal documentation, model artefacts, client data, and any other materials belonging to CoreAxis Technologies or its clients. IT offboarding is coordinated through CoreSupport; your manager will initiate the process in advance of your last working day.

Your obligations of confidentiality and intellectual property assignment survive the termination of your employment.

6. Payroll Administration

6.1 Paydays

Employees are paid on a fixed monthly schedule communicated by Finance and Human Resources. Where a scheduled payday falls on a public holiday or weekend, payment is processed on or before the preceding working day. Pay is not available in advance of scheduled paydays.

6.2 Amount of Pay

Salaried employees receive their contracted monthly salary for each completed pay period. Where overtime has been authorised, it will be compensated in accordance with your employment agreement and applicable law. Travel time is generally not included in hours worked for the purpose of calculating pay unless your agreement specifies otherwise.

6.3 Payroll Deductions

Statutory deductions are made from your gross salary in accordance with applicable Indian tax and social security legislation, including income tax (TDS), Provident Fund (PF) contributions, Employee State Insurance (ESI) where applicable, and Professional Tax. Additional deductions may apply where authorised by you in writing or required by a court order. A detailed breakdown of your deductions appears on your monthly payslip, accessible through CoreHR.

6.4 Administrative Pay Corrections

If you identify a discrepancy in your pay — whether an overpayment or underpayment — report it to Human Resources or Finance through CoreHR as soon as possible. Errors will be corrected promptly. In the case of an overpayment, the excess amount will be recovered through agreed adjustments to future pay.

6.5 Final Pay

Your final pay will be processed in accordance with applicable law and your employment agreement. Outstanding salary, accrued but unpaid leave (where payable), and approved expense reimbursements will be settled in your final settlement, less any amounts owed to CoreAxis Technologies.

7. Time Off, Leaves Of Absence, And Benefits

7.1 Annual Leave

Regular full-time employees are entitled to paid annual leave based on their completed years of continuous service with CoreAxis Technologies:

Years of Continuous Service	Annual Leave Entitlement
Less than 1 year	Pro-rated from joining date
1 year but less than 5 years	15 working days per year
5 years but less than 10 years	18 working days per year
10 years or more	21 working days per year

Leave must be requested and approved in advance through CoreHR. Requests should ordinarily be submitted at least five working days before the intended leave date, except in emergencies. Leave may generally be taken in minimum half-day increments. Unused annual leave may be carried forward to the next calendar year up to a maximum limit set by CoreAxis Technologies; beyond that limit, accrued leave will lapse unless otherwise required by applicable law.

Leave pay is based on your base salary and does not include allowances, incentives, overtime, or bonuses. CoreAxis Technologies may, where business needs require, designate mandatory leave periods and will communicate these in advance through CoreHR.

7.2 Public Holidays

Regular full-time employees are entitled to paid leave on national and regional public holidays. National public holidays observed by CoreAxis Technologies include:

- Republic Day — 26 January
- Independence Day — 15 August
- Gandhi Jayanti — 2 October

In addition to national holidays, CoreAxis Technologies observes a set of regional and restricted holidays applicable to the Chennai and Bengaluru offices in accordance with applicable state regulations. The full holiday schedule for each calendar year is published by Human Resources at the beginning of the year and is accessible through CoreHR.

Where a public holiday falls on a weekend, CoreAxis Technologies may designate a substitute working day in its place. Employees required to work on a designated public holiday will be compensated or provided with a substitute day off in accordance with applicable law.

7.3 Sick Leave

Regular full-time employees who have completed at least 90 days of continuous service are entitled to paid sick leave in accordance with applicable Indian labour law and CoreAxis Technologies' internal policy, as communicated by Human Resources.

On each day of illness-related absence, notify your manager before your scheduled start time and log the absence in CoreHR. For absences extending beyond three consecutive working days, a medical certificate from a registered physician is required before you return to work.

7.4 Leaves of Absence — Generally

CoreAxis Technologies may grant unpaid leaves of absence on a case-by-case basis to employees who require extended time away from work for personal, family, or medical reasons not covered by statutory entitlements. Requests must be submitted in writing to Human Resources through CoreHR with as much advance notice as possible. Approval is not guaranteed and will take into account business needs, tenure, and the nature of the circumstances.

CoreAxis Technologies complies with all applicable Indian labour laws with respect to statutory leave categories, including maternity, paternity, and other mandatory entitlements.

7.5 Maternity and Paternity Leave

Female employees are entitled to maternity leave in accordance with the Maternity Benefit Act, 1961, as amended. Eligible employees should contact Human Resources through CoreHR well in advance of the anticipated leave period to understand their entitlements and plan a smooth transition.

CoreAxis Technologies also supports new fathers and non-birth primary caregivers. Paternity and caregiver leave entitlements are communicated by Human Resources and are subject to applicable law and company policy. Employees returning from parental leave are supported through a structured re-entry plan developed in consultation with their manager and HR.

7.6 Bereavement Leave

Regular full-time employees who have completed at least 90 days of continuous service may be granted paid bereavement leave upon the death of an immediate family member. Immediate family members for this purpose include the employee's spouse or domestic partner, parent, child, sibling, grandparent, grandchild, and the equivalent relations of the employee's spouse or domestic partner.

Paid bereavement leave ordinarily does not exceed three working days per event. Requests should be submitted to your manager and logged through CoreHR as soon as circumstances allow. Where additional time is needed, annual leave or unpaid leave may be requested.

7.7 Employee Benefits

CoreAxis Technologies offers a range of benefits designed to support the professional development, health, and overall wellbeing of our people. Benefits are subject to eligibility criteria and may be updated from time to time; the current details for each programme are available through CoreHR and AxisHub.

7.8 Health and Wellness

Group Health Insurance: All regular full-time employees are enrolled in CoreAxis Technologies' group health insurance plan. Coverage details, including dependent coverage options, are communicated during onboarding and available through CoreHR.

Employee Wellness Programme: Employees have access to a wellness programme that includes mental health support, counselling resources, and access to health and fitness platforms. Mental health days may be taken in conjunction with sick leave provisions, subject to manager awareness.

Mental Health Support: CoreAxis Technologies recognises that demanding technical work can be cognitively taxing. Confidential support services and professional counselling are available through our Employee Assistance Programme, accessible through HR.

7.9 Flexible and Remote Working

Hybrid Work Flexibility: As described in the Hybrid Work section, employees work under a hybrid model appropriate to their department and role.

Home Office Allowance: Employees who work remotely on a regular basis are provided with a one-time home office setup allowance to support an ergonomic and productive workspace. Details and claiming instructions are available through CoreExpense.

Internet Reimbursement: Regular remote employees receive a monthly internet reimbursement to offset the cost of a reliable home connection. Claims are submitted monthly through CoreExpense.

7.10 Learning and Professional Development

Annual Learning Budget: Every regular full-time employee receives an annual personal learning budget, which may be used for online courses, certifications, books, or conference

registration fees. The budget is tracked through AxisLearn, which integrates with external platforms including Coursera and Udemy.

AI and Cloud Certifications: CoreAxis Technologies actively supports employees seeking professional certifications in AI, machine learning, cloud platforms, and related disciplines. Certification fees are covered through the learning budget, with additional support available for high-priority certifications aligned with company technology strategy.

Conference Sponsorship: Employees may apply for sponsorship to attend relevant industry conferences, workshops, and seminars. Applications are reviewed by managers in consultation with HR and are subject to budget availability and business relevance.

Monthly Learning Hours: Every team observes a Monthly Learning Hour — a standing, protected block of time dedicated to professional development. During this time, employees may explore new research, work through courses on AxisLearn, or participate in internal knowledge-sharing sessions.

Research Publication Support: Employees who wish to contribute to peer-reviewed research publications or present at academic conferences may apply for support through the AI and Machine Learning department. Publication must be reviewed and approved in accordance with the company's intellectual property and confidential information policies.

7.11 Company Culture and Engagement

Hackathons: CoreAxis Technologies organises internal hackathons — typically biannual — where employees form cross-functional teams to build experimental solutions. Hackathon projects have historically been a source of new product features and process improvements.

Innovation Week: Once a year, all teams participate in Innovation Week — a company-wide event during which regular project work is paused to allow focused exploration of new ideas. Outputs are presented at the Innovation Showcase, open to all employees.

Internal Tech Talks: Employees are encouraged to deliver Tech Talks to their colleagues — informal 30-to-45-minute sessions on a technical topic, research area, or tool they have explored. Proposals can be submitted through the AI and Machine Learning or Software Engineering leads.

Employee Recognition Awards: CoreAxis Technologies runs a quarterly Employee Recognition programme through AxisHub. Managers and peers can nominate colleagues who have demonstrated exceptional contribution, collaboration, or embodiment of the company's core values. Award recipients are announced at Town Hall Meetings.

7.12 Additional Benefits

Provident Fund and Statutory Benefits: All employees receive the statutory benefits required under Indian law, including PF contributions, ESI (where applicable), and Professional Tax, as described in the Payroll section.

Referral Bonus: Employees who successfully refer a candidate who joins CoreAxis Technologies in a regular full-time role are eligible for a referral bonus, payable after the referred employee completes their probationary period. Referral programme details are available through CoreHR.

8. Policies

8.1 Compliance with Laws and Ethical Conduct

CoreAxis Technologies conducts its business honestly, ethically, and in full compliance with applicable laws and regulations. Every employee is expected to uphold the same standard — in dealings with clients, vendors, colleagues, government agencies, and members of the public.

If you become aware of or suspect conduct that violates applicable laws or CoreAxis Technologies' ethical standards, you have an obligation to report it to your manager, Human Resources, or through any formal reporting channel the company establishes. CoreAxis Technologies does not tolerate retaliation against employees who raise concerns in good faith.

8.2 Information Technology and Software Policy

All technology resources provided by CoreAxis Technologies — including corporate laptops, mobile devices, GitHub Enterprise repositories, Azure DevOps environments, Kubernetes clusters, Slack and Microsoft Teams accounts, cloud platform access, and collaboration tooling — are company property and are to be used for authorised business purposes.

CoreAxis Technologies holds licences to use specific third-party software and tools. Employees must not reproduce, copy, distribute, or install software in violation of its licence terms. All software on company-owned or company-managed devices must be properly licensed. Unlicensed or unauthorised applications are subject to immediate removal.

Employees must not share, transfer, or expose proprietary code, internal scripts, or application-level access to any external party without written authorisation from management. Activity on all CoreAxis Technologies information technology resources — including networks, devices, repositories, and cloud environments — may be monitored and audited at any time. Employees should not expect privacy on company systems.

Source code in GitHub Enterprise repositories, API keys, cloud credentials, and secrets must be managed through the access control and secrets management systems designated by the Information Security team. Credentials must never be hardcoded in source files, committed to repositories, or transmitted through unencrypted channels. All production deployments go through the approved CI/CD pipeline in Azure DevOps; no code may be deployed to a production environment by other means without explicit authorisation.

Report suspected violations to the Information Technology department or log them through CoreSecure.

8.3 Confidential Information

During your employment, you will have access to information that is confidential, proprietary, or commercially sensitive. CoreAxis Technologies takes the protection of this information seriously and expects every employee to do the same.

Confidential information includes, but is not limited to: client identities, engagement details, and commercial terms; product roadmaps and technical specifications; AI model architectures, trained model weights, and training methodologies; RAG system configurations, retrieval logic, system prompts, and embedding models; contents of vector databases used in production; internal training datasets, fine-tuning corpora, and data pipelines; API keys, authentication tokens, and cloud credentials; source code and software design; financial data, pricing, and commercial contracts; and employee compensation information.

Access to confidential information is granted on a need-to-know basis. You must not disclose or distribute it to anyone who has not been explicitly authorised to receive it — whether inside or outside the company. Your confidentiality obligations extend across all formats and media, including Confluence pages, GitHub repositories, Slack messages, cloud storage, and personal notes, and they continue after your employment ends.

Actual or suspected breaches of confidentiality must be reported immediately to your manager and logged through CoreSecure.

8.4 Conflicts of Interest

A conflict of interest arises when your personal, financial, or private interests diverge from — or could reasonably be perceived to diverge from — your professional obligations to CoreAxis Technologies. Examples include: holding a financial interest in a client, competitor, or supplier; providing paid services to any organisation with whom CoreAxis Technologies does business;

using your position to advance personal financial interests; or accepting gifts or payments from external parties in circumstances that could compromise your judgement.

Disclose any actual or potential conflict of interest in writing to Human Resources through CoreHR as soon as you become aware of it. Undisclosed conflicts discovered after the fact may be treated as serious misconduct.

8.5 Drugs and Alcohol

CoreAxis Technologies is a drug- and alcohol-free workplace. The use, possession, distribution, or sale of illegal or controlled substances on company premises or during working hours is strictly prohibited. Employees must not perform their duties while impaired by alcohol or any other substance. Violations of this policy are treated as serious misconduct.

If you have reasonable grounds to believe a colleague is not complying with this policy, notify your manager or Human Resources promptly.

8.6 Electronic Communications

CoreAxis Technologies provides communication tools — including corporate email, Slack, Microsoft Teams, Confluence, and video conferencing systems — for business purposes. These tools are company property; employees should have no expectation of privacy with respect to their use. The company may monitor, audit, and retrieve communications conducted through company-managed systems.

Use good professional judgement in all electronic communications. Keep messages purposeful, accurate, and limited to recipients who need to be included. Do not use company communication tools to send or receive obscene, defamatory, discriminatory, or otherwise offensive content. Before sending a message, consider how it would read if presented in a legal or formal context.

Exercise similar caution on external social media. Public commentary about CoreAxis Technologies, its clients, its technology, or its employees must not disclose confidential information or misrepresent the company's positions.

8.7 Employment of Individuals with Disabilities

CoreAxis Technologies does not discriminate on the basis of physical or mental disability. Where an employee or applicant has a disability, reasonable workplace adjustments will be made to enable them to perform the essential functions of their role, subject to applicable constraints.

Employees who require adjustments are encouraged to speak confidentially with Human Resources so that appropriate arrangements can be made.

8.8 Equal Employment Opportunity

CoreAxis Technologies makes employment decisions — including recruitment, appointment, promotion, compensation, training, and separation — on the basis of merit, qualifications, skills, and performance. We do not discriminate on the basis of gender, age, religion, caste, race, nationality, marital status, disability, pregnancy, sexual orientation, or any other characteristic protected by applicable law.

We are committed to a workplace culture in which every person is treated with dignity and respect. Concerns about the application of this policy should be raised with Human Resources. Complaints will be investigated promptly and impartially.

8.9 Harassment and Workplace Respect

CoreAxis Technologies maintains a workplace that is free from harassment, bullying, and discriminatory conduct — in the office, in remote settings, in virtual meetings, and across all electronic communication channels.

Harassment is broadly defined as unwelcome conduct, whether verbal, written, physical, or electronic, directed at an individual on the basis of a protected characteristic and having the purpose or effect of creating an intimidating, hostile, humiliating, or offensive environment. Sexual harassment is strictly prohibited. It includes unwelcome sexual advances, requests for sexual favours, and verbal or physical conduct of a sexual nature that affects employment decisions or creates a hostile or offensive environment. Sexual harassment can take many forms — inappropriate comments, suggestive messages, offensive imagery, and unwanted physical contact among them.

If you experience or witness harassment, report it to your manager, the Human Resources department, or any senior member of management. Reports are handled with appropriate confidentiality. Employees who raise concerns in good faith will not face retaliation. Substantiated complaints will result in disciplinary action, up to and including termination of employment. Managers who are aware of harassment and fail to report it are also subject to disciplinary action.

8.10 Outside Employment

Employees may engage in outside employment or private consulting activities, provided they notify their manager in advance and the activity does not create a conflict of interest, involve CoreAxis Technologies' confidential information or intellectual property, or interfere with their

ability to fulfil their responsibilities here. CoreAxis Technologies may ask an employee to discontinue outside employment where it determines such work is inconsistent with their obligations or detrimental to the company's interests.

8.11 Privacy and Searches

CoreAxis Technologies respects its employees' privacy but may conduct searches of company premises, systems, and equipment where there is reasonable cause to believe that a policy violation, breach of law, or security incident has occurred or is occurring. Searches may extend to company-owned or company-managed devices, repositories, accounts, and communication platforms. Employees should not have any expectation of privacy with respect to company property or company systems.

8.12 Safety and Workplace Security

CoreAxis Technologies is committed to a safe and secure working environment for all employees, at both office locations and in remote settings. Employees are responsible for taking reasonable care of their own safety and the safety of those around them.

Report unsafe conditions, accidents, near-misses, or security incidents to your manager and log them through CoreSecure without delay. Comply with all safety protocols and security procedures, including those relating to physical access control, data security, and the handling of sensitive materials.

Employees working remotely are responsible for maintaining a safe and secure home working environment, including ensuring that company information and equipment are not accessible to unauthorized individuals.

8.13 Solicitation

Individuals who are not employees of CoreAxis Technologies may not solicit or distribute materials on company premises. Employees may not solicit colleagues or distribute materials of a commercial, political, or non-business nature during working hours or in working areas of the office. Officially sanctioned internal channels — such as designated Slack channels for community interest activities — may be used during non-working hours (meal times and breaks) for appropriate peer communications

8.14 Use of Company Property

All property provided by CoreAxis Technologies — including computing devices, peripherals, mobile phones, office equipment, access credentials, cloud accounts, software licences, and

GitHub Enterprise access — is to be used for authorised business purposes. Personal use is not permitted unless specifically approved by your manager.

Employees are responsible for the care and security of company property assigned to them. All company property must be returned in good condition at the time of offboarding or upon request.

8.15 Violence and Weapons

CoreAxis Technologies has zero tolerance for violence or threats of violence in the workplace or in any context connected with company business. Any employee who engages in violent, threatening, or intimidating behaviour — in person, electronically, or otherwise — will face immediate disciplinary action up to and including termination, and may be referred to civil or criminal authorities.

Possession of weapons, explosive devices, or any other dangerous materials on company premises or in the course of company business is strictly prohibited. Report violent or threatening behaviour, or any conduct you believe poses a security risk, to management or law enforcement immediately.

9. Company Technology Policies

CoreAxis Technologies builds and operates AI systems that process sensitive client data and power real-world enterprise decisions. As a result, our approach to technology — particularly AI — carries responsibilities that go beyond standard software development. The policies in this section apply to all employees who design, develop, evaluate, deploy, or operate any AI system, component, or related infrastructure.

9.1 Responsible AI Usage

AI systems built by CoreAxis Technologies directly influence how our clients operate their businesses. The principles below are not aspirational — they are operational requirements that apply from the first prototype through to production deployment and ongoing monitoring.

Accountability: Every AI system must have a designated technical owner accountable for its behaviour, limitations, and risk profile. No AI model, agent, or automated pipeline may be deployed to a client environment without documented sign-off through the Model Approval Workflow, which requires sign-off from both the technical lead and the relevant project manager. All approvals are recorded in Confluence.

Transparency: AI systems must be documented such that their intended behaviour, known limitations, failure modes, and data dependencies can be understood by those who operate and oversee them. Employees must not conceal known risks or limitations from clients, project stakeholders, or internal reviewers. System prompts, retrieval configurations, and embedding

model choices used in RAG pipelines must be documented and version-controlled in the Model Registry.

Fairness: Employees working on AI systems must actively evaluate and mitigate bias in training data, model outputs, and system design. Where an AI system affects individual outcomes — through recommendations, classifications, or automated decisions — a formal bias evaluation must be documented prior to deployment. Human evaluation is required for any system producing outputs that directly affect end users.

Safety: All AI systems must undergo appropriate risk assessment, LLM evaluation, and red team testing before deployment. Red team exercises — in which team members systematically attempt to surface harmful, incorrect, or manipulable behaviours — are a mandatory step in the release process for all client-facing AI products. Findings are tracked in CoreSecure and resolved before sign-off.

Hallucination Mitigation: Employees developing LLM-based applications are responsible for implementing appropriate grounding strategies — such as retrieval-augmented generation, citation enforcement, and output validation — to reduce the risk of factually incorrect outputs reaching end users. Hallucination risk assessments form part of the standard pre-deployment checklist.

Prompt Injection Awareness: All systems that process external or user-supplied input through an LLM must be designed with prompt injection risks in mind. Responsible prompt engineering includes input sanitisation, instruction boundary enforcement, and regular adversarial testing of prompt structures. Prompt review sessions are conducted during the design phase of any new LLM integration.

Non-Deception: AI systems must not be designed to deceive users about their nature, capability, or origin. Where a system is AI-generated or AI-assisted, this must be represented accurately in client-facing interfaces and documentation.

Concerns about the responsible design or deployment of any AI system should be escalated to the relevant project lead or the Head of AI and Machine Learning. AI governance matters are reviewed at the quarterly AI Research Showcase, where the team discusses evaluation results, risk findings, and improvements to the company's responsible AI practices.

9.2 Acceptable Use of AI Tools

CoreAxis Technologies makes available a range of AI-powered tools for employee use in the course of their work, including internal LLM interfaces, code generation assistants, AI-powered search, and the company's internal RAG platform. Use of these tools is governed by the following standards:

Authorised Tools Only: Employees may use AI tools listed on the approved tools registry, maintained by the AI and Machine Learning team and accessible through KnowledgeSphere. Use of external or personal AI tools for work-related tasks requires prior approval from the relevant department head. The approved tools list is reviewed quarterly.

No Submission of Confidential Data to External Platforms: Employees must not submit client data, internal datasets, trained model weights, vector database contents, source code, API keys, credentials, system prompts, or any other confidential information to any external AI platform — including publicly available consumer AI services — without explicit written authorisation. This applies regardless of whether the submission appears incidental or is through a third-party integration.

Critical Review of AI-Generated Outputs: AI-generated outputs — including code produced by tools such as GitHub Copilot, documentation, data analysis, and recommendations — must be reviewed and validated before being incorporated into a deliverable, client communication, or production system. The employee who submits or deploys the output is accountable for its accuracy and appropriateness, not the tool that produced it.

No Misrepresentation: Employees must not represent AI-generated content as their own unaided work in any context where attribution is material — such as academic submissions, professional certifications, or contractual representations.

Compliance with Tool Terms: Employees must ensure that their use of any AI tool complies with its applicable terms of service and licence conditions. CoreAxis Technologies is not responsible for the consequences of employee misuse of external platforms.

The approved tools registry and associated usage notes are maintained in KnowledgeSphere and updated by the AI and Machine Learning team as the tooling landscape evolves.

9.3 Protection of AI Models and Datasets

CoreAxis Technologies' trained models, fine-tuned weights, retrieval corpora, embedding models, vector database contents, training datasets, evaluation benchmarks, and associated data pipelines are core intellectual assets of the organisation. These assets are subject to the same — and in some cases stricter — protections as our proprietary source code.

Access Controls: Access to model repositories, training datasets, and production AI systems is granted on a need-to-know basis through access control systems managed by Information Security. All model assets hosted in the company's internal Model Registry require role-based permissions. Shared credentials and unauthorised access grants are prohibited.

Dataset Versioning and Governance: All datasets used in model training, fine-tuning, and evaluation must be versioned and tracked through the company's designated dataset management tooling, consistent with standards maintained by the AI and Machine Learning

team. Data sourced from clients may only be used for the purposes explicitly described in the relevant client agreement. Repurposing client data for internal model training requires written client consent and review by the Head of AI and Machine Learning.

Experiment Tracking: All model training runs, fine-tuning experiments, hyperparameter searches, and evaluation cycles must be logged in MLflow. Undocumented experiments — including ad hoc training runs — are not permitted on company infrastructure. Results must be traceable and reproducible.

Model Approval Workflow: Before any model — including a fine-tuned or RAG-augmented model — is deployed to a client environment or integrated into a production product, it must complete the Model Approval Workflow. This includes documented evaluation results, red team testing outcomes, hallucination risk assessment, and written sign-off from the technical lead and project manager. All approvals are recorded in the Model Registry and Confluence.

Prohibited Disclosure: Model architectures, weights, training methodologies, dataset composition, system prompts, RAG retrieval configurations, and embedding model details are confidential. They may not be disclosed to external parties, published in research papers, or discussed in public forums without going through the company's approved disclosure process, which requires legal and management review.

External Transfer Restrictions: Transferring trained model weights, datasets, or system configurations to any external organisation, personal cloud storage, or non-company-managed environment is prohibited without written approval from senior management and the Information Security team.

Suspected theft, unauthorised access, or misuse of AI assets must be reported immediately through CoreSecure and to the Head of AI and Machine Learning.

9.4 Data Privacy and Information Security

CoreAxis Technologies handles sensitive information on behalf of its clients and its own organisation. Every employee has a role in protecting it.

Data Classification: CoreAxis Technologies maintains a data classification framework — available in KnowledgeSphere — that assigns sensitivity levels to different categories of information. Employees must handle data in accordance with its classification. When in doubt, treat information as confidential until the classification is confirmed with Information Security.

Client Data: Client data must be processed only for the purposes specified in the relevant client agreement, stored only in systems approved for that purpose, and not retained beyond the period required. Employees must not access client data beyond what their role requires. Any question about permissible use of client data should be directed to Information Security.

Secure Development Practices: Employees involved in software engineering, AI development, or infrastructure management must follow the secure development standards published by Information Security and accessible through CoreDocs.

Key requirements include: never hardcoding secrets in source code; managing API keys, tokens, and credentials through the approved secrets management system; applying least-privilege access principles; and ensuring that all code undergoes security review before being merged in GitHub Enterprise and deployed through Azure DevOps.

Cloud Infrastructure Security: Cloud resources — whether used for model training, inference serving, data storage, or application hosting — must be configured in accordance with the security baselines established by Information Security. No storage bucket, cloud API, or infrastructure resource should be made publicly accessible without explicit approval. Configuration drift is monitored; deviations will be flagged and must be remediated promptly.

Incident Reporting: Any actual or suspected security incident — including unauthorised system access, accidental exposure of credentials or data, loss of a company device, or a suspected prompt injection attack on a production system — must be logged in CoreSecure immediately. Speed matters; early reporting significantly limits the impact of a security breach. Information Security operates an on-call process for critical incidents.

Compliance: CoreAxis Technologies complies with all applicable data protection and information security laws and regulations in India, as well as the contractual data security obligations it has assumed with its clients. Employees are expected to cooperate fully with any audit, assessment, or security review.

9.5 Intellectual Property

All intellectual property created by employees in the course of their employment at CoreAxis Technologies — or using company resources, systems, or confidential information — belongs exclusively to CoreAxis Technologies. This includes source code, software, algorithms, trained AI models, datasets, inventions, methodologies, technical documentation, design assets, and all other work products.

Assignment of Rights: By accepting employment at CoreAxis Technologies, you assign to the company all intellectual property rights in work created in the course of your employment. You will cooperate with any additional documentation the company requires to formalise this assignment.

Pre-Existing IP: If you intend to use intellectual property you created prior to joining CoreAxis Technologies — such as open-source tools or personal libraries — disclose it to Human Resources before using it in your work. CoreAxis Technologies will not assert ownership over properly disclosed pre-existing IP, but you must ensure its use does not breach third-party rights or your obligations under this handbook.

Open Source: Before incorporating open-source software into CoreAxis Technologies' products or codebases, confirm that the applicable licence is compatible with commercial use. Copyleft licences that require disclosure of proprietary source code must be reviewed and approved by the technical lead and, where appropriate, legal counsel before being used.

Third-Party IP: Employees must not copy, reproduce, or incorporate the proprietary work of third parties into CoreAxis Technologies' products or deliverables without appropriate licensing or written authorisation.

Research and Publication: Employees who wish to publish research or present at external academic or industry events must submit their intended output for review through the AI and Machine Learning department. Publication must not disclose confidential information, proprietary methods, or client-specific details without explicit approval from senior management and, where required, the client.

Post-Employment Obligations: Intellectual property obligations survive the termination of your employment. Work developed using company resources or confidential information after your employment ends may be subject to CoreAxis Technologies' ownership claims depending on the circumstances.

10. Ongoing Handbook Compliance

The policies in this handbook exist to create a workplace where every employee can do their best work — confidently, safely, and in line with the standards CoreAxis Technologies holds itself to. Compliance is a shared responsibility.

If you observe conduct that is inconsistent with any provision of this handbook — whether by a colleague, a manager, or any individual acting in connection with CoreAxis Technologies' business — you are expected to report it. Reports may be made to your direct manager, the Human Resources department, any senior member of management, or through CoreSecure for security-related matters.

CoreAxis Technologies is committed to investigating all reported concerns promptly and impartially, and to protecting employees who raise genuine concerns in good faith from retaliation of any kind.

If you believe a policy in this handbook is unclear, missing an important detail, or no longer reflects how the company operates, we welcome that feedback. Raise it through HR or your manager; this handbook is reviewed annually and evolves with the organisation.

11. Conclusion

CoreAxis Technologies operates in a field that is changing rapidly. Our policies, tools, and working practices will evolve as the organisation grows, as the technology landscape shifts, and as we learn from our experience building responsible AI systems at scale. We will communicate significant changes to this handbook through CoreHR and AxisHub in advance where possible. This handbook is provided for informational purposes only. It does not constitute an employment contract and does not guarantee employment for any specified period. Unless you are party to a signed written employment contract that explicitly provides otherwise, your employment is governed by the terms of your offer letter and applicable law.

Where applicable Indian laws change or conflict with the provisions of this handbook, those laws will take precedence. CoreAxis Technologies will update its policies and practices accordingly. Read this handbook. Keep a copy for your reference. If anything is unclear, ask — Human Resources and your manager are always available to help. This handbook supersedes all prior versions and any informal understandings relating to the matters covered herein.

12. Receipt And Acknowledgment

CoreAxis Technologies — Employee Handbook (Version 2.0)

By signing below, I acknowledge and confirm the following:

- I have received, read, and understood the CoreAxis Technologies Employee Handbook (Version 2.0).
- I understand that if I have questions about this handbook, I may direct them to my manager or to the Human Resources department.
- I understand that this handbook does not constitute an employment contract and does not guarantee employment for any fixed term. Either party may bring the employment relationship to an end in accordance with my employment agreement and applicable law.
- I acknowledge that this handbook is provided for informational purposes only and does not create contractual obligations beyond those expressly set out in a signed employment agreement.
- I understand that CoreAxis Technologies may modify, amend, or withdraw any provision of this handbook and will use reasonable efforts to communicate significant changes.
- I acknowledge that any representations inconsistent with this handbook are not binding on CoreAxis Technologies unless they are made in writing and signed by an authorised representative of the company.
- I acknowledge that this handbook supersedes all prior versions and all informal understandings relating to the matters covered herein.
